

Testimonial Compact Crawler CPT 200 Patrick Koggel | Sondeer Techniek

'This compact and powerful machine gets you everywhere.'

'The Compact Crawler CPT 200 is compact and, by being well anchored, very powerful. And that is quite special for such a small machine. Anchoring takes some time, but you can get anywhere with it, like indoor and backyards.'

'We were quickly convinced that the Compact Crawler CPT 200 should be our first CPT machine. It's a solid, long-term machine. The CPT 200 works easily, after a few trials we were able to get started with it. The machine is easy to operate.'

'In addition to the Compact Crawler CPT 200, we also have a CPT crawler, an 11-ton machine, for the larger projects. But you need a flatbed trailer for that. We have the Compact Crawler behind the car in a trailer and with that we drive everywhere like construction sites.'

'The machine is 84 cm (33 in) wide so you can actually go anywhere. We have only had to remove a door frame a few times. But then it was often a renovation and it's not such a problem.'

The anchors are quite heavy and we have them on the machine now. If you have to pick them up one by one, it takes a lot of time. Now we take everything in one go.'
